

### **HIV/AIDS Prevention Education**

The life-threatening dangers of HIV (Human Immunodeficiency virus) and AIDS (acquired immunodeficiency syndrome) and its prevention will be taught in the district. HIV/AIDS prevention education will be limited to the discussion of the life-threatening dangers of the disease, its spread, and prevention. Students will receive such education at least once each school year beginning no later than the fifth grade.

The HIV/AIDS prevention education program will be developed in consultation with teachers, administrators, parents, and other community members including, but not limited to, persons from medical, public health, and mental health organizations and agencies. The curricula and materials used in the HIV/AIDS education program may be the model curricula and resources available through OSPI or, if developed by the school district, be approved for medical accuracy by the State Department of Health, HIV/AIDS Prevention and Education Services (Office on AIDS). District-developed curricula will be submitted to the Office on AIDS accompanied by an affidavit of medical accuracy stating that the material in the district-developed curricula has been compared to the model curricula for medical accuracy and that if in the opinion of the district the district-developed materials are medically accurate. Upon submission of the affidavit and curricula, the district may use these materials until the approval procedure to be conducted by HIV/AIDS Prevention and Education Services has been completed.

At least one month before teaching HIV/AIDS prevention education in any classroom, the district will conduct, during weekend and evening hours for parents and guardians of students, at least one presentation concerning the curricula and materials that will be used for such education. The parents and guardians will be notified of the presentation and that the curricula and materials are available for inspection. The high school will have staff available for information and a presentation, if requested. No student may be required to participate in HIV/AIDS prevention education if the student's parent or guardian, having attended one of the district presentations, objects in writing to participation.

The curriculum for HIV/AIDS prevention education will be designed to teach students which behaviors place a person dangerously at risk of infection by the human immunodeficiency virus (HIV) and methods to avoid such risk including, at least:

- the dangers of drug abuse, especially that involving the use of hypodermic needles; and
- the dangers of sexual intercourse, with or without condoms.
